Troubleshooting / Guidelines

The engine isn't turning on! / The car turned off!

● This car is a Hybrid, just like a Prius - it drives like an electric golf cart at low speeds to save you Gas!
● Put the car in Drive, and Go, even if the engine isn't running!!

Does it require EV charging?

● **No charging is required!** Use regular "87" Gasoline and drive like a normal car.

The Gas isn't 100% full

● The Ford Escapes have this issue and may show ⅞ of a tank when they are parked at an angle. Please be sure to fill 100% before dropoff as it may display under ¾ if you fill to ⅞ and will incur a refueling fee.

How do I connect to Apple Carplay / Android Auto?

● Connect your Bluetooth to "F7-XXX" or "ATOTO-XXX" and follow the instructions on your phone, as needed.

The radio screen is blank - I need Carplay / Android Auto / Bluetooth

● Turn the car off, open the door, and wait 3 seconds. This resets the stereo. On occasion, this occurs when connecting a new phone. ○ If all else fails, the “RST” button can be used with a paperclip for a full reboot (this might remove steering wheel controls)
